WHY YOU SHOULDN’T GET THE COVID-19 “VACCINE”

A summary of the facts for individuals
Governments around the world are embarking on mass marketing campaigns to push vaccines on the public.

There is much more misinformation regarding COVID testing, masks, lockdowns, etc., but here, we will just focus on vaccinations.

Stats to keep in mind!

Source: CDC (Estimated Infection Fatality Rates for COVID-19)
First of all, it is NOT a Vaccine

From Dr. David Martin:

This is not a vaccine. We’re using the term “vaccine” to sneak it under public health exemptions. This is mRNA packaged in a fat envelope that is delivered to a cell. It is a medical device designed to stimulate the human cell into becoming a pathogen creator.

Vaccines are a legally defined term under public health law, they’re legally defined term under the CDC and FDA standards. And a vaccine specifically has to stimulate both an immunity within the person who is receiving it, but it also has to disrupt transmission.

That is not what this is. They have been clear in saying that the mRNA strand that is going into the cell is not to stop transmission. It is a treatment.

But if it was discussed as a treatment, it would not get the sympathetic ear of the public health authorities, because then people would ask: what other treatments are there?
Adverse Effects

Reports of Adverse Events After COVID Vaccines Surpass 200,000, Including 943 Among 12- to 17-Year-Olds (updated May 14, 2021)

20% of the deaths were related to cardiac disorders
Adverse reactions to vaccines are underrepresented

According to a Harvard Study, less than 1% of all adverse reactions to vaccines are submitted to the National Vaccine Adverse Events Reports System (VAERS)

"VAERS data released today showed 50,861 reports of adverse events following COVID vaccines, including 2,249 deaths and 7,726 serious injuries between Dec. 14, 2020 and March 26, 2021."

Those many just be ONE PERCENT of all adverse reactions!
Many believe there is solid evidence that the CDC is holding back much of the data, and that the number of deaths and injuries reported is much higher. “The total deaths now recorded following experimental COVID injections since December 2020 is more than the recorded deaths following vaccines for the previous 15 and a half years.”

Vaccination Injuries (Dr. Jessica Rose, PhD, MSc, BSc)

“Analysis suggests the vaccines are likely cause of reported deaths, spontaneous abortions, anaphylactic reactions, cardiovascular, neurological, and immunological adverse events.”

“mRNA platforms are new to humans with regard to mass injection programs in the context of viruses. There is currently no way to predict potential detrimental outcomes with regards to SAE [serious adverse effect] occurrences in the long-term. Also, with regards to short-term analysis, this data is limited based on reporting that likely significantly underestimates actual events.”

CDC Data Show 4,000+ Reported Deaths Following COVID Vaccines as Kids 12 and Older Now Eligible

VAERS data released today showed 193,914 reports of adverse events following COVID vaccines, including 4,057 deaths and 17,210 serious injuries between Dec. 14, 2020 and May 7, 2023.

12 Fully Vaccinated People Died of COVID in L.A. County + More

The Defender’s COVID NewsWatch provides a roundup of the latest headlines related to the SARS CoV-2 virus, including its origins and COVID vaccines.

Trends in Vaccinations and Deaths (ISRAEL)

Israel was one of the first countries to start vaccinations (19-Dec-2020). Since vaccinations began, both CV19 cases & deaths continued to increase for ~5 weeks.

https://twitter.com/Metabo_PhD/status/1387548104073912324
BAHRAIN
CV19 cases & deaths start rising as vaccinations start. Also, as vaccinations ramped up just before March 16 (2021), you see both cases + deaths follow with rising numbers.

IRAN
Iran has also experienced increases in CV19 cases after vaccinations started. Vaccine doses administered sharply increased March 19 (2021).

https://twitter.com/Metabo_PhD/status/1387548104173912324
INDIA is experiencing a significant increase in both CV19 cases & deaths. The graphs of CV19 cases, deaths, and share of people receiving their first vaccine dose are virtually indistinguishable

https://twitter.com/Metabo_PhD/status/1387548104073912324
This is only a small selection of the disturbing trends with vaccinations and deaths

https://twitter.com/Metabo_PhD/status/1387548104073912324
America’s Frontline Doctors Caution Against it

• “Vaccine safety requires proper animal trials and peer-reviewed data, neither of which has occurred during operation warp speed.”

• “The COVID-19 vaccines are still experimental. They are currently being used on an ‘emergency’ basis and are not FDA approved.”

• “This is the first time that an mRNA mechanism is being used in a vaccination”

• “Despite trying for decades, scientists have never been able to create a successful coronavirus vaccine. Whenever they think they have, the experimental coronavirus vaccine has failed and animals who got the experimental vaccine died.”

• “There are entire populations for whom we don’t know the data...we have no knowledge of the immune response in vaccinated individuals who later contract the disease, and we also do not know the effects on disease course in vaccinated individuals with waning immunity. We do not know the effects on the elderly. We do not know the effect on the pregnant or soon to be pregnant.”
America’s Frontline Doctors Caution Against it

• “The trial data on the vaccinations released so far has not addressed the issue of transmission of the virus. That is, the efficacy data is primarily based on symptoms...Could the vaccine create asymptomatic carriers that can unknowingly transmit the virus? The scientists are very upfront about the fact that they don’t know if the vaccine even stops the spread of the virus!”

• “Strong vaccine advocates Dr. Offit and Dr. Hotez...have not really endorsed these new experimental vaccines, because previous coronavirus vaccines have a long history of failure due to antibody dependent enhancement. Antibody Dependent Enhancement (ADE), is when anti-COVID antibodies, created by a vaccine, instead of protecting the person, cause a more severe or lethal disease when the person is later exposed to SARS-CoV-2 in the wild...It may only be seen after months or years of use in populations around the world.”
America’s Frontline Doctors Caution Against it

• “On December 1, 2020, the ex-Pfizer head of respiratory research Dr. Michael Yeadon and the lung specialist and former head of the public health department Dr. Wolfgang Wodarg filed an application with the Medicine Agency responsible for EU-wide drug approval, for the immediate suspension of all SARS CoV 2 vaccine studies.”

• “America’s Frontline Doctors’ holds that it is unethical to advocate for the vaccine to persons under 50. The risk and safety evidence based upon trials cannot be justified in younger persons.”
America’s Frontline Doctors Caution Against it

- “Pfizer expects to collect $15 billion in 2021 from sales of its mRNA experimental COVID vaccine.”
- “The same companies (and executives) that profit from this vaccine are immune from all liability.”
- “This new biotechnology introduces something called a ‘spike protein’ instead of the traditional attenuated antigen response in a conventional vaccine.”
- “Spike proteins and the lipid nanoparticles which carry the mRNA...are both capable of passing through the ‘blood-brain barrier’ which typically keeps the brain and spinal cord completely insulated from entrants into the body. There simply has not been enough time to know what...problems will develop.”
- “Traditional vaccines do not pass through the blood-brain barrier. Crossing the blood-brain barrier places patients at risk of chronic inflammation and thrombosis (clotting) in the neurological system, contributing to tremors, chronic lethargy, stroke, Bell’s Palsy and ALS-type symptoms. The lipid nanoparticles can potentially fuse with brain cells, resulting in delayed neuro-degenerative disease. And the mRNA-induced spike protein can bind to brain tissue 10 to 20 times stronger than the spike proteins that are (naturally) part of the original virus.”

Seychelles: 62.2% of population currently vaccinated

“A critical appraisal of phase III clinical trial data for the Pfizer/BioNTech vaccine BNT162b2 and Moderna vaccine mRNA-1273 shows that absolute risk reduction measures are very much lower than the reported relative risk reduction measures. Yet, the manufacturers failed to report absolute risk reduction measures in publicly released documents.”

[Diagram showing event rates and risk reduction calculations]

https://www.mdpi.com/1648-9244/57/3/199/htm?fbclid=IwAR2catoR1OG4JS-4vkJGdNocznPzUoDVeGmEtEC8DcNCTvZ2RFck
From England’s “Roadmap” regarding vaccine rollouts

“The resurgence in both hospitalisations and deaths is dominated by those that have received two doses of the vaccine, comprising around 60% and 70% of the wave respectively. This can be attributed to the high levels of uptake in the most at-risk age groups, such that immunisation failures account for more serious illness than unvaccinated individuals.”

So...

60% of the new hospitalisations are from vaccinated people
70% of new deaths are from vaccinated people

Due to the fact that it is the oldest age groups that have received the vaccine first, which would account for some (but not all) of the high numbers.

Vaccination Transmission

- Pfiezer has stated: “An occupational exposure occurs when a person receives unplanned direct contact with a vaccine test subject [i.e. any vaccinated person], which may or may not lead to the occurrence of an adverse event. These people may include health care providers, family members, and other people who are around the trial participant.”

- So vaccine study participants may become super spreaders of something that triggers secondary adverse events in people that never had the vaccine.

- “The vaccine produces many trillions of particles of spike proteins in the recipient. Patients who are vaccinated can shed some of these (spike protein) particles to close contacts. The particles have the ability to create inflammation and disease in these contacts.”

- “A person’s body is being suddenly flooded with 13 trillion of these particles and the spike proteins bind more tightly than the fully intact virus. Because of the biomimicry (similarity) on the spike, shedding appears to be causing wide variety of autoimmune disease (where the body attacks its own tissue) in some persons. Worldwide cases of pericarditis, shingles, pneumonia, blood clots in the extremities and brain, Bell’s Palsy, vaginal bleeding and miscarriages have been reported in persons who are near persons who have been vaccinated.”

COVID Vaccines May Bring Avalanche of Neurological Disease (summary)

• The typical vaccine takes 12 years to develop, and of all the vaccines in development, only 2% are projected to make it through all Phase 2 and 3 clinical phases of testing.

• The COVID-19 vaccine was developed in less than one year, which makes it impossible to assess safety and efficacy.

• In the next 10 to 15 years, we are likely to see spikes in prion diseases, autoimmune diseases, neurodegenerative diseases at younger ages, and blood disorders such as blood clots, hemorrhaging, stroke and heart failure. **While sudden death is one apparent side effect, the vast majority of side effects won’t be known until a decade or more from now.**

• There is the potential for vaccine to become part of your DNA, which will last forever and cause unforeseeable consequences.

CDC Changes Rules for Counting Breakthrough Cases as More Fully Vaccinated People Test Positive

A breakthrough case is recorded if a person tests positive for COVID after being vaccinated. The Centers for Disease Control and Prevention (CDC) will report only those breakthrough cases resulting in hospitalization or death. This will result in a lower overall number of breakthrough cases reported in the US, giving a false sense of vaccine safety.

The CDC has also lowered the testing cycle threshold (CT) to 28, but only for the fully vaccinated. Currently, a patient is considered positive for COVID if the CT is below 35 (the recommended value). This refers to the number of cycles needed to amplify viral RNA to be detected. Lowering the CT threshold to 28 for vaccinated people may lead to missing infectious persons, so breakthrough numbers may not be recorded.

We haven’t seen the virus, we haven’t isolated it, and we have no test for it.

No virus identified:
The virus has not been isolated. When we use the PCR test to try to identify it, we are not comparing it against anything. Without a virus identified, there is no reference material at hand, and so it is not a valid test. This disease identification is in no way scientific, and so we should not be prescribing solutions without proper knowledge of what we are dealing with.

Clinical Trials:
“There is no possibility of developing an appropriate and valid vaccine as neither a valid reference virus nor a valid test is available to monitor the efficacy of the vaccine.”

There were no COVID patients available for clinical trials, and there is no isolated virus able to be used to induce COVID in a group of participants. The clinical trials performed were on healthy people, half inoculated with the vaccine and half without.

These trials were not performed scientifically. Fewer people showed symptoms and were PCR positive who had the vaccine compared to those who didn’t. Yet we already know that the PCR test does not test for COVID. So numbers about the vaccine’s “effectiveness” are unfounded.

Gaps in vaccine trial data

There are many gaps in the data regarding vaccine safety and efficacy. There are no data for

- Anyone younger than 18 or older than 55
- Pregnant or lactating mothers
- Auto-immune conditions
- Immuno-compromised individuals
- Transmission of COVID-19
- Preventing mortality from COVID-19
- Duration and protection from COVID-19
Geert Vanden Bossche (leading scientist in vaccines and immunology)

Getting the vaccine destroys your innate immune system to fight coronaviruses
Our immune system contains nonspecific antibodies that can target any COVID variant.
Yet antibodies induced by the COVID vaccine are specific. They are long lived and will stay in our bodies permanently. These antibodies only respond to a specific virus, not variants. They dominate over our natural nonspecific antibodies and outcompete them. This is a big problem because our natural immunity is suppressed permanently.
So, getting the vaccine ensures we have no natural immunity and protection against variants and any coronavirus, which makes the pandemic MORE deadly.

“That’s ‘one small step for the virus, one giant catastrophe for mankind’”
Case Reporting of Vaccinated and Non-vaccinated People

Watch this short video: https://www.youtube.com/watch?v=pSRzy_kpnEo
A Video Summary of the COVID Vaccine

WHAT WE KNOW

- NOT a Vaccine
- IS an Experimental mRNA Inject
- Rushed Through Clinical Trials
- Skipped Safety Testing
- Long List of Side Effects
- People Are Dying
- Not Effectively Preventing or Containing Covid
- Hidden Ingredients

Watch this video: https://childrenshealthdefense.org/defender/what-we-know-may-never-know-about-covid-vaccines/
Conclusion

- I hope that the sources presented has given you the information to conclude that getting the COVID vaccine is NOT in your best interest. We can stay healthy and safe without experimental injections in our bodies.
